Installing Your Bimini

Step #1

1. Match Tubes 1 thru 6. Make Sure the button pops all the way through the hole.

Step #2

1. Identify the front of the Bimini by locating the shorter straps.

Step #3

1. Most Bimini's are mounted on the rear leg of your Skylon Tower. To determine the proper height for the mounting ring width, place your bimini top in the closed position. Place the Bimini top inside of your Skylon Tower. Adjust the Bimini approximately 1"inch to 2" inches of clearance from the tower. Hold the top of the base inside of the tower leg. Swing the Bimini forward and back to insure clearance from your Bimini touching your Skylon Tower.

Step #4

1. Install the Mounting rings in the pre determined location (step #3)or Windshield mounts.

Step #5

1. Open the Bimini top, tilt it slightly forward. Locate the eyehook on the left side and install it to the tower front leg, repeat the right side.

Step #6

1. Locate the back eye hook on the left side, and repeat the right side.
